

Altéa Network RM overview

Main functions, workflows
and data sources

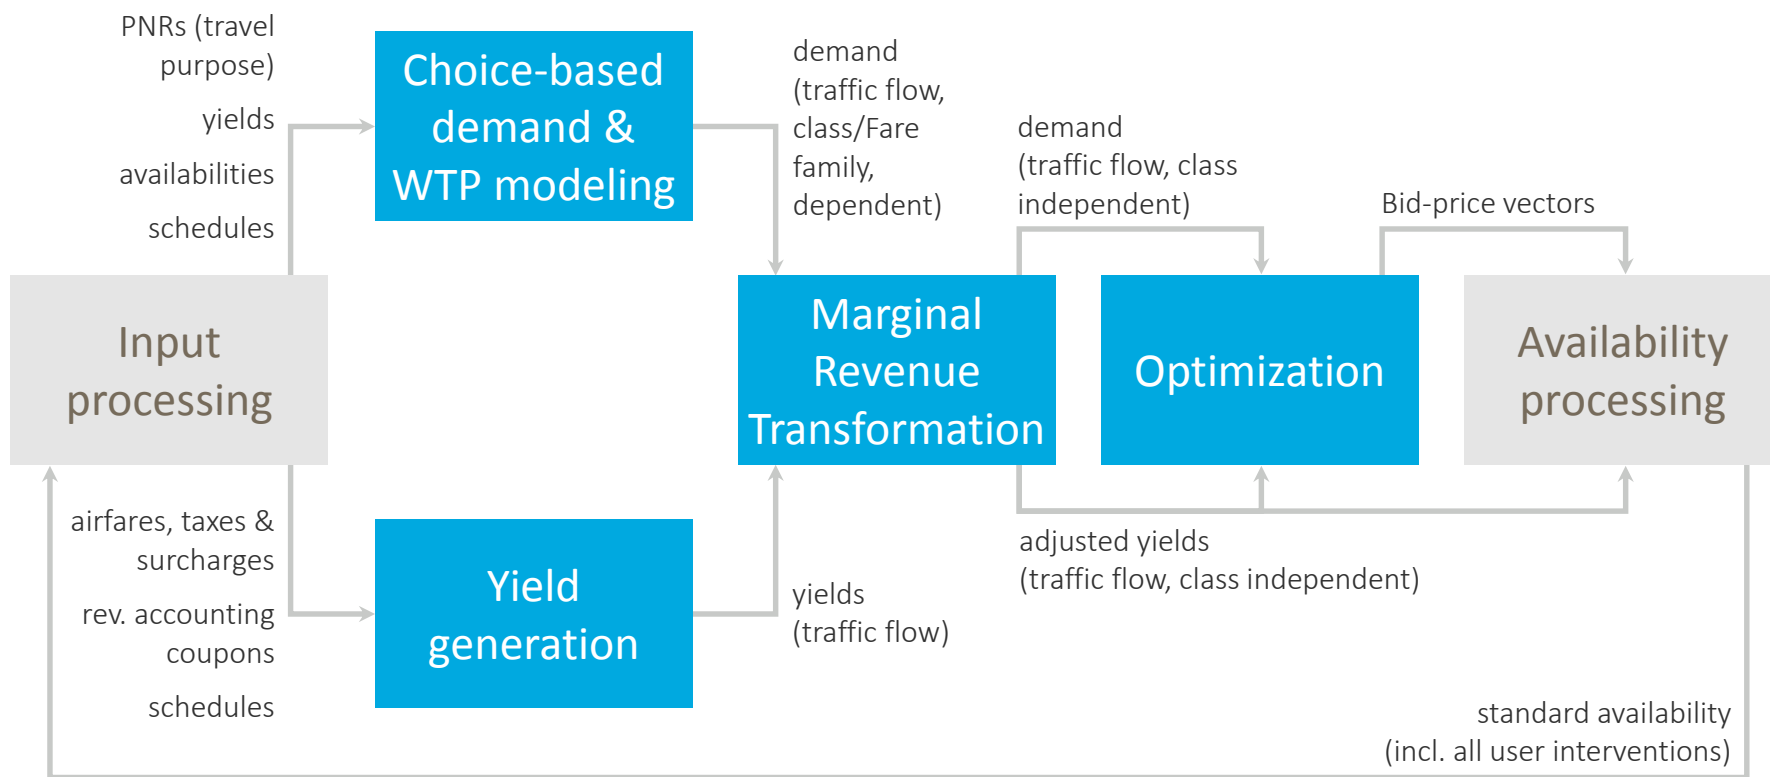

Remy Le Guen
Product Management, Revenue Management
December 5th 2016, Doha

Our revenue optimization solutions leverage investment on Altéa platform

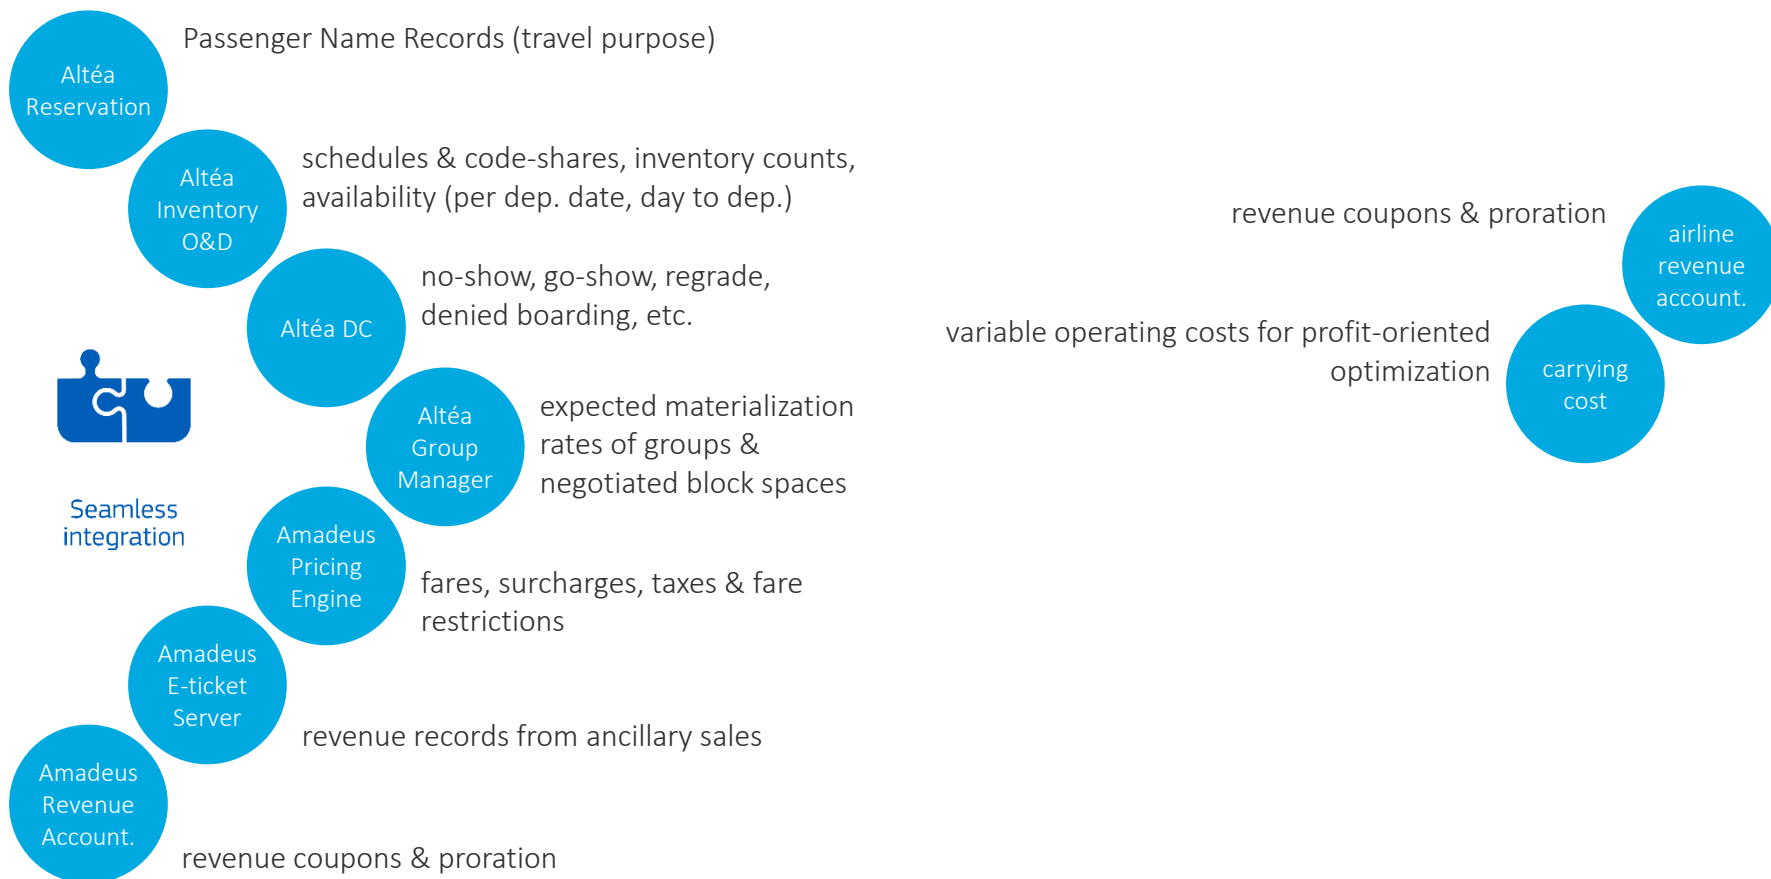

Revenue Management workflow

Data & functions in Altéa Network RM

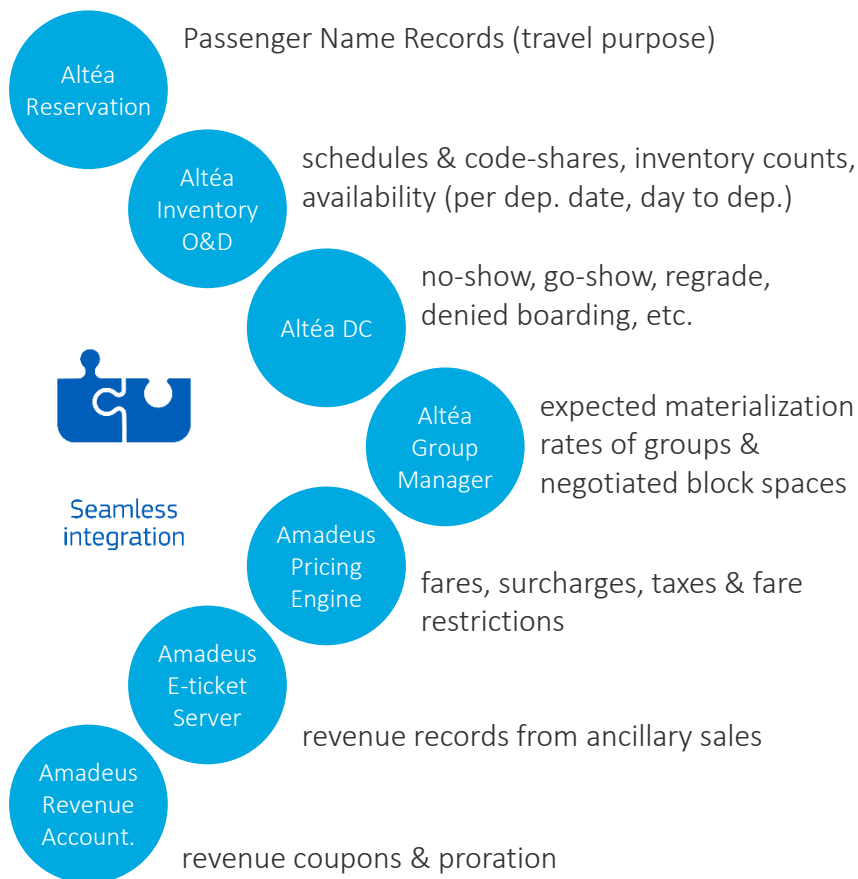

We leverage a seamless access to the goldmine of high quality Altéa data to improve RM decisions

High quality Altéa data in RM
leverage Altéa PSS platform

Our objective is to develop wider market insights in Revenue Management through wider data

High quality Altéa data in RM
leverage Altéa PSS platform

Wider market insights in RM beyond the airline own data

Altéa Network RM model is in line with how you sell your products to your customers

native management of Fare Families
& unrestricted fare structures

in a customer
choice-based model

robust estimation of
willingness to pay

proven algorithms tested
for their **business impacts**

unparalleled quality
of input data

This model is also designed to improve the accuracy and the efficiency of your RM operations

self-calibration

weekly basis

minimal error-oriented calibration

native monitoring of **forecast quality**

robust
to sparse data

Identification of **new traffic flows**
& automated **sponsorship**

Optimal price points are delivered, based on the airline pricing & the customer willingness to pay

Yields based on **actual fares** on sale
plus **all surcharges & taxes**

Amadeus pricing engine
no manual input

a **single source** of pricing inputs
to any RM function

monitoring tool
price dispersion & yield quality

fare adjustments
willingness to pay

New optimization logics maximize further the contribution of traffic flows across your network

profit-oriented
based on carrying costs

revenue optimization
algorithms in line with
customer choice modeling

high frequency optimization
after each booking or cancel

consistent execution of
RM strategies **in all channels**

Altéa platform allows for greater access to high quality data and processing capability

Process	Frequency
Collection of input data	Daily or interactive
Generation of O&D yield values	Daily
Generation of O&D forecast values	Daily or interactive
Generation of O&D fare modifiers (WTP)	Daily or interactive
Recalibration of the O&D forecast model (choice-based demand & WTP)	Weekly
Application of O&D user interventions	Interactive
Network optimization	Daily
Flight optimization	Daily or interactive after each booking/cancel

As a natural extension to Altéa platform, usability & efficiency of business operations are increased

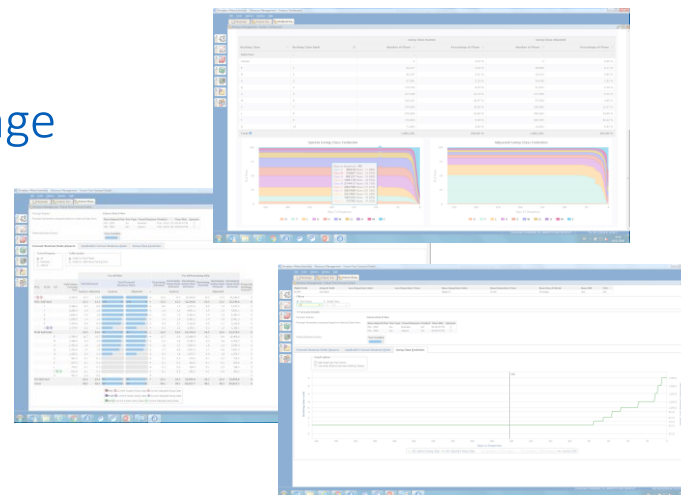

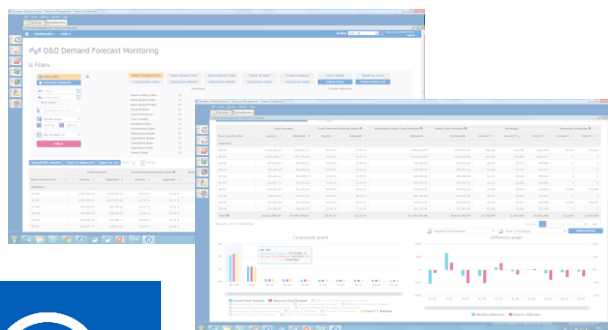

single GUI

seamless interactions
between RM, RAAV, inventory,
reservation, group management

simple & intuitive analytics to manage
customer behavior & willingness to pay

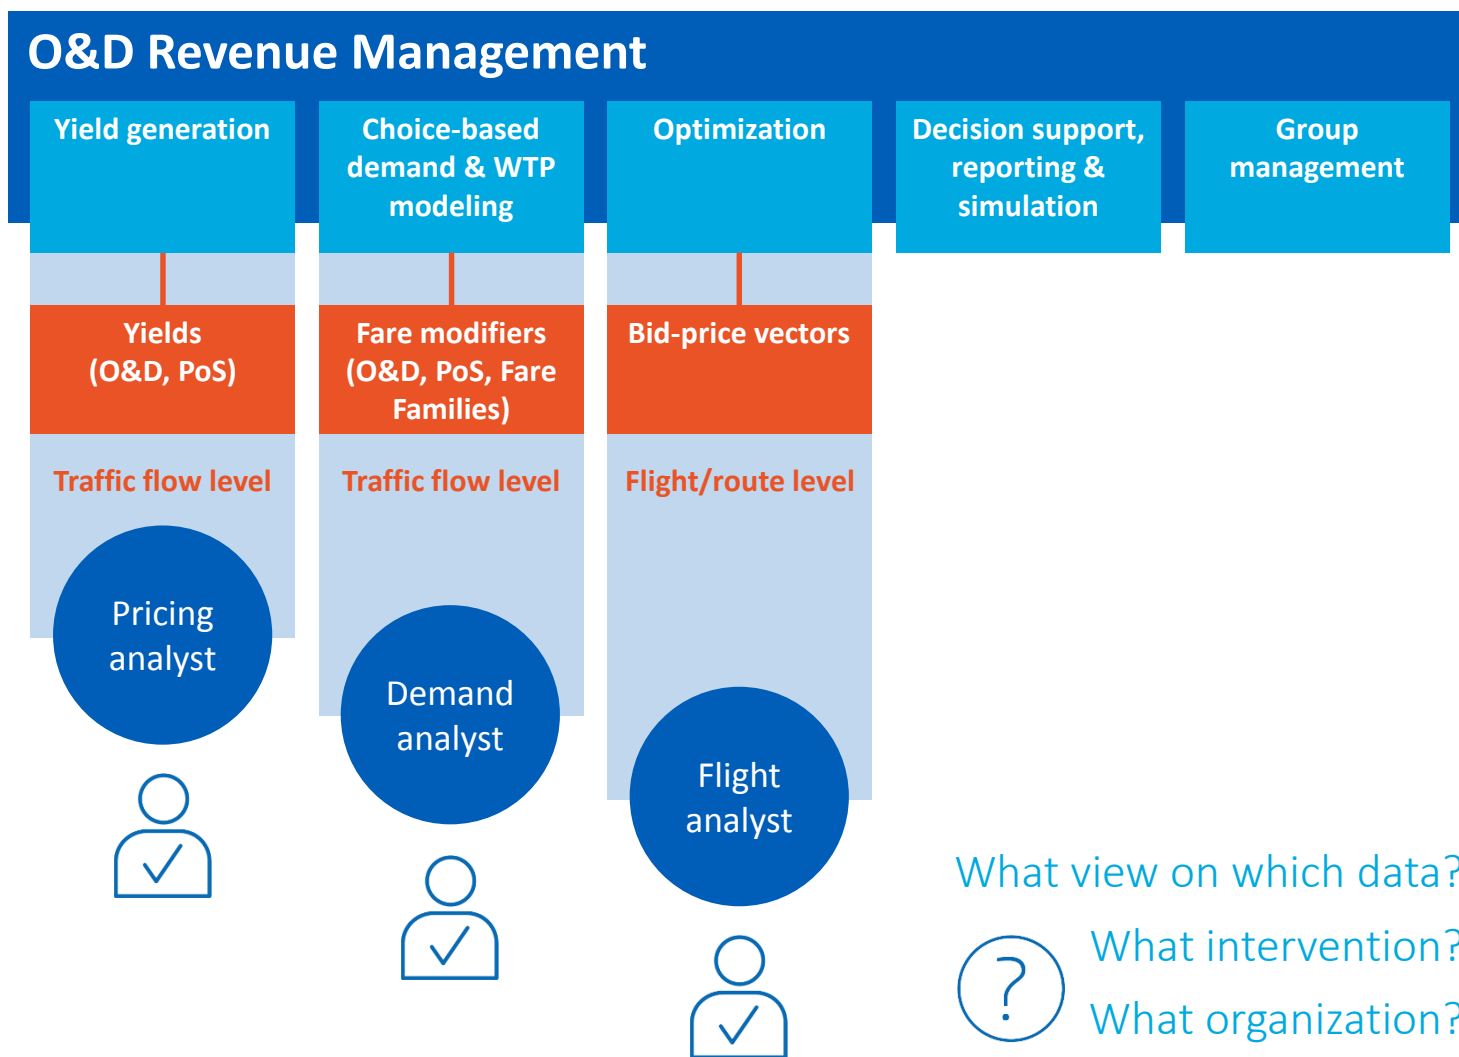

live application
of O&D interventions

data **quality & processing** capability

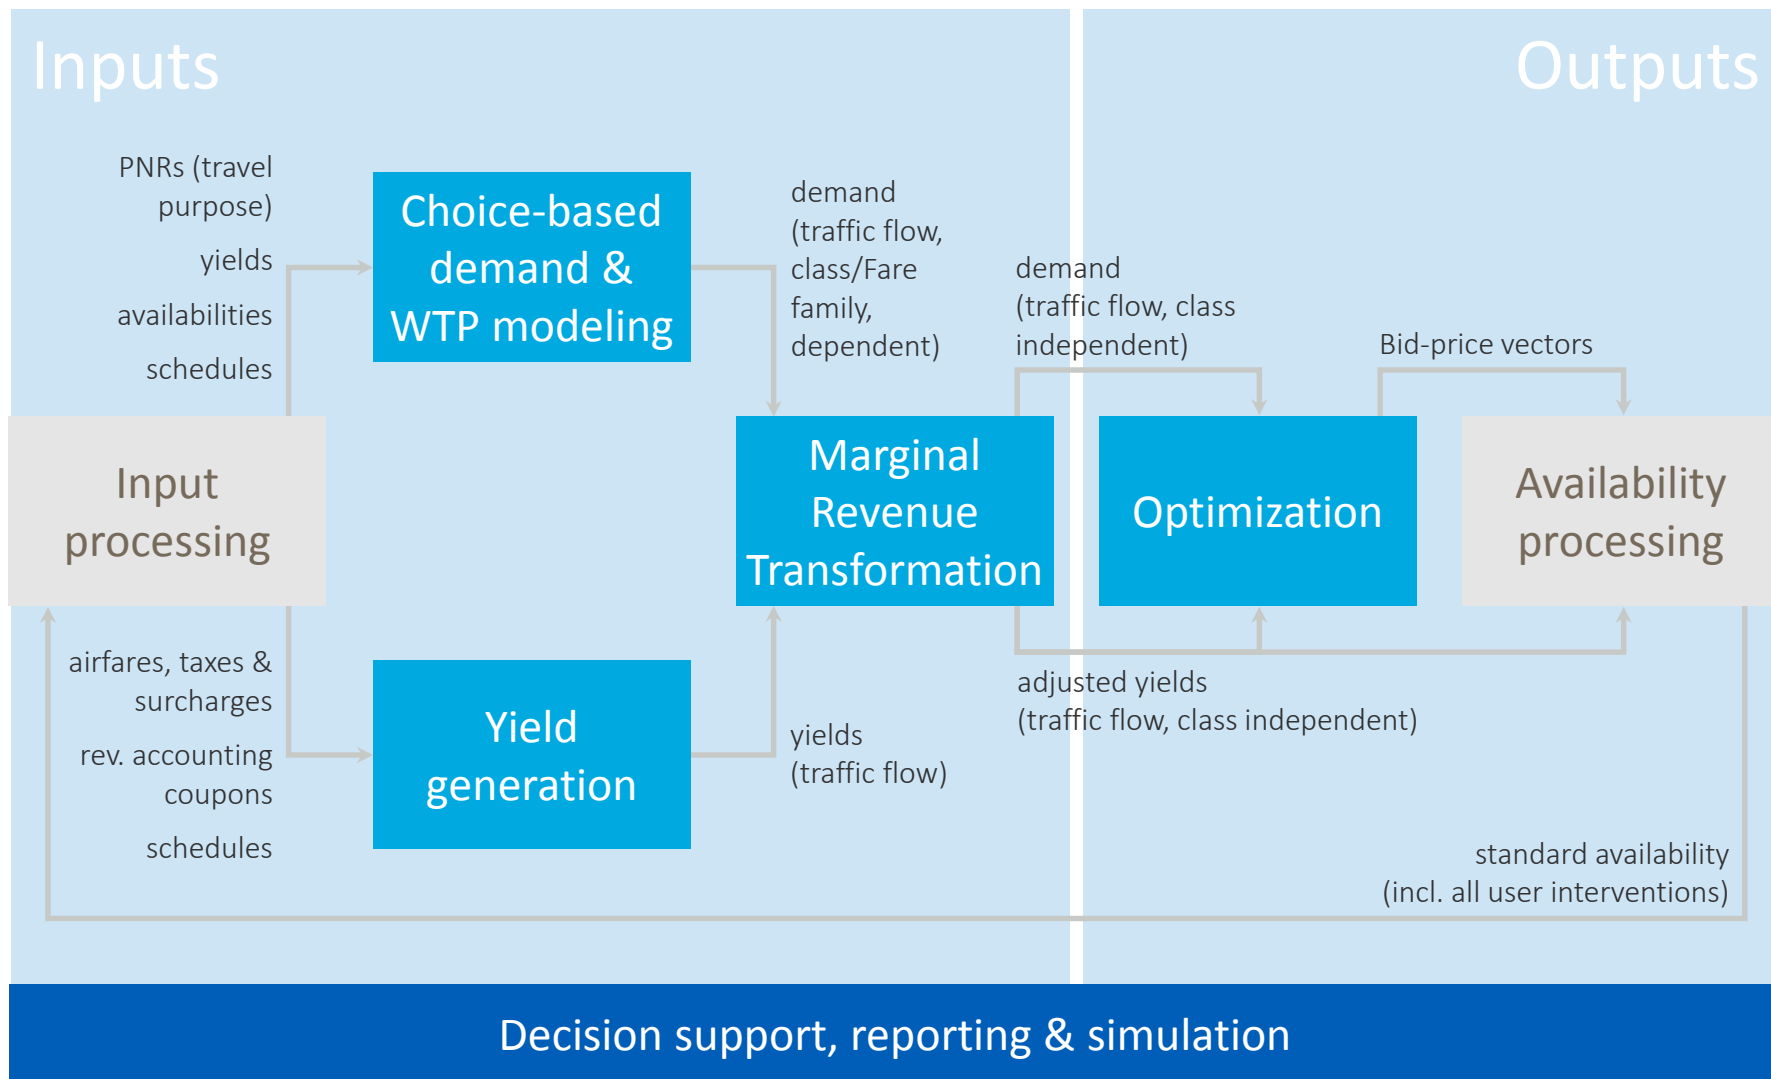

O&D operations also mean coordination between different user profiles, working on different levels

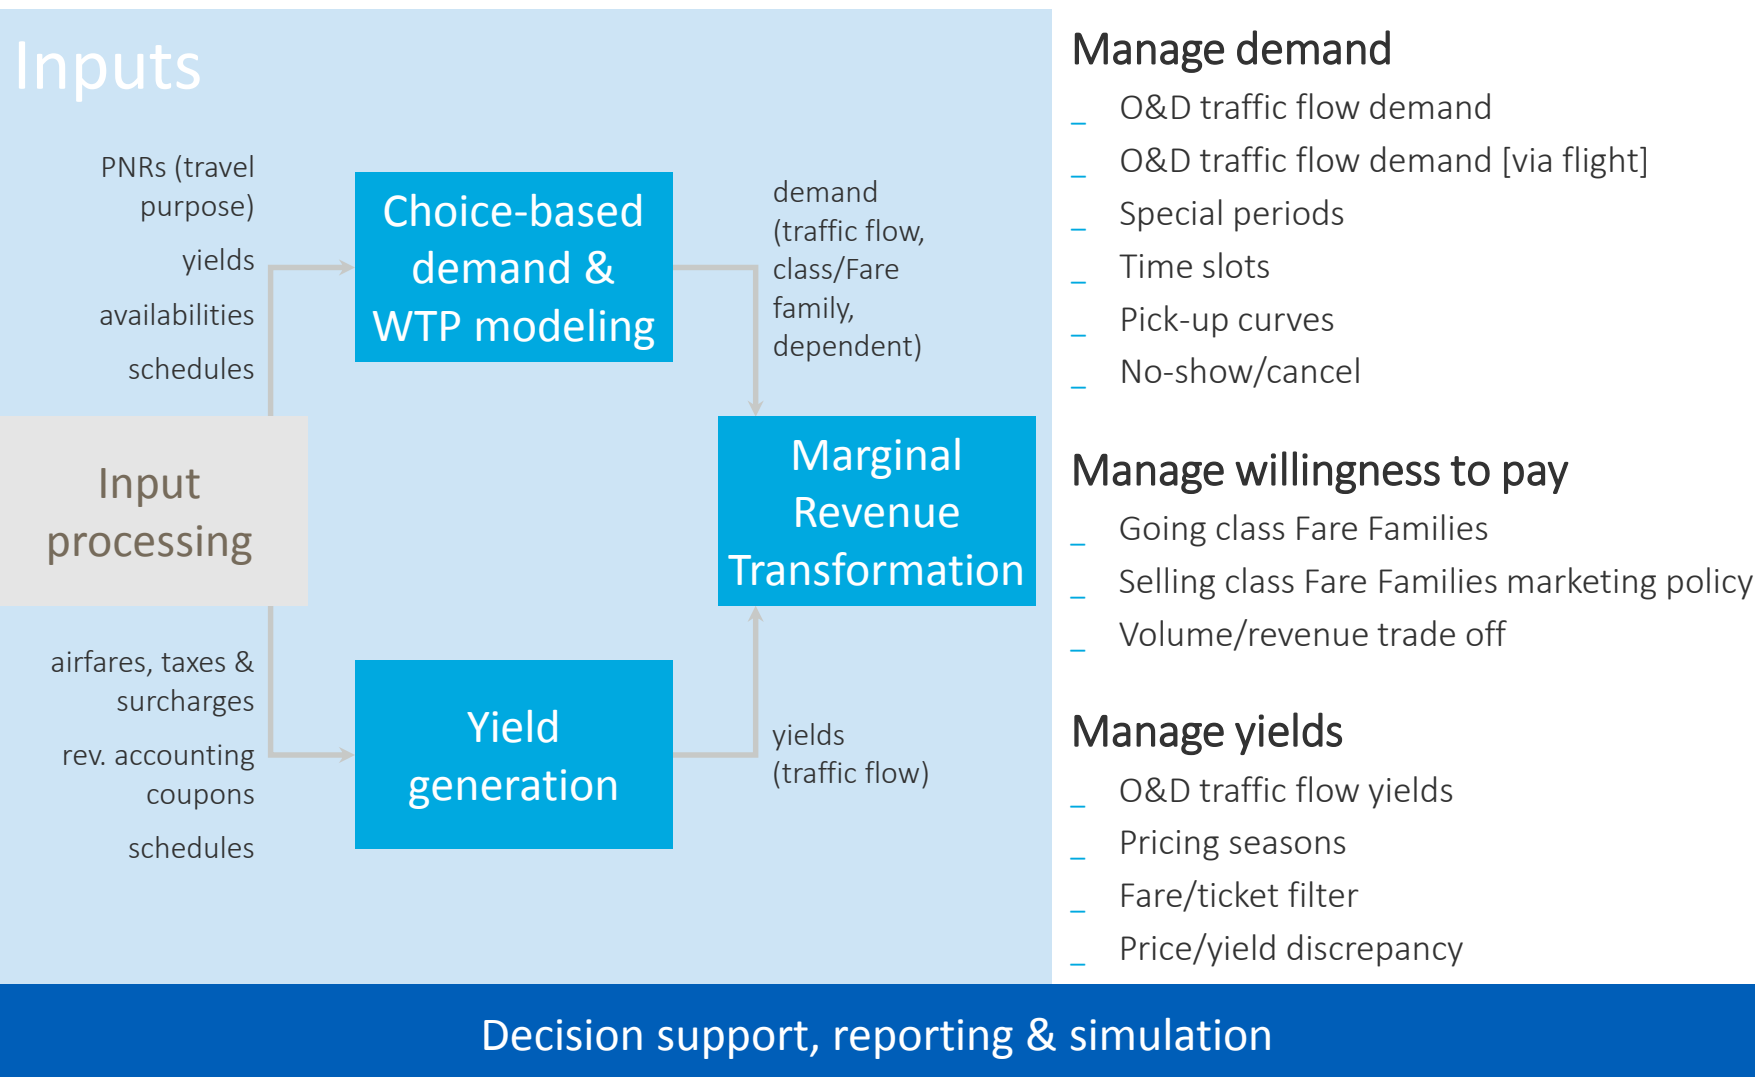

Revenue Management workflow

Revenue Management workflow

Data & functions in Altéa Network RM

Revenue Management workflow

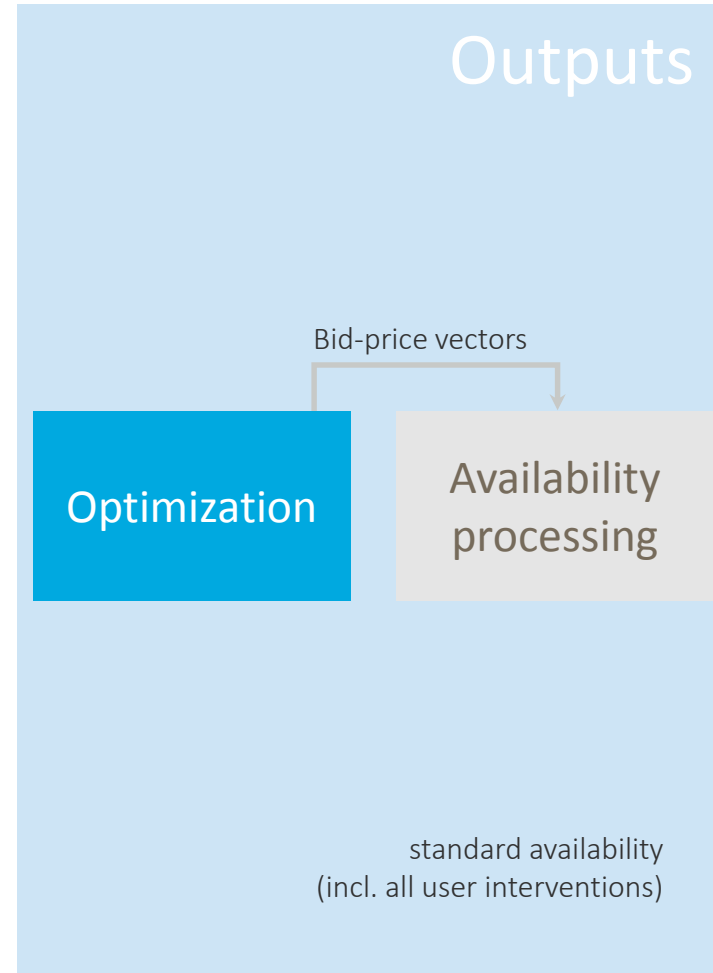

Data & functions in Altéa Network RM

Manage flights

- Overbooking
- Demand across cabins
- Optimal saleable configuration

Manage real-time availability

- Active Valuation strategies
- Dynamic limits

Thank you!
